Vishnu Chemicals Announces Solar Power Capacity Expansion Through Its Subsidiary

November 23, 2026

November 23, 2026: Vishnu Barium Private Limited (VBPL), a wholly owned subsidiary of Vishnu Chemicals Limited (BSE: 516072, NSE: VISHNU), has announced an expansion of its solar power capacity by 4.19 MW through a group captive power arrangement.

With this expansion, VBPL's total solar power capacity will increase from the existing 4.30 MW to 8.49 MW, strengthening the company's commitment to sustainable operations and renewable energy adoption.

The additional solar power supply is expected to commence in Q4FY27 and is expected to reduce existing power expenses in the subsidiary company by 10% from existing levels, with an estimated investment payback period of one year.

The expanded capacity is expected to meet 25% of VBPL's total power requirements, increasing the overall share of solar energy in the company's power consumption to ~40%.

As part of the expansion, VBPL will acquire an 18.69% equity stake in Fractal Nova Private Limited (FNPL), a renewable energy developer, for a total consideration of INR 1,46,64,990. The acquisition is expected to be completed in November 2026. The investment is being undertaken solely to facilitate power procurement under the Group Captive mechanism and does not represent diversification into the power generation business. Under the applicable electricity regulations, captive consumers are required to collectively maintain a minimum 26% equity ownership in the generating company to qualify for benefits available under the Group Captive framework. VBPL's proposed 18.69% equity participation forms part of this arrangement.

This expansion underscores Vishnu Chemicals' continued focus on operational efficiency, energy cost optimisation and sustainable manufacturing, while increasing the contribution of renewable energy to its operations.

ABOUT VISHNU CHEMICALS LIMITED

Vishnu Chemicals Limited epitomises the manufacture of high-performance speciality chemicals, with strong market leadership and an intelligent symphony of forward and backward integration to produce world-class Chromium, Barium and Strontium chemicals serving the diverse needs of customers across 50+ countries.
