SINGAPORE FINTECH FESTIVAL 2026

Veefin launches AI OS at Singapore FinTech Festival 2026, giving banks an agentic platform to build their own AI Employees

Banks can create AI Employees across the full universal banking suite on one governed platform, running on Veefin 4.0 or alongside their existing core systems

SINGAPORE, 18th NOVEMBER 2026

Veefin today launched Veefin AI OS, an enterprise agentic platform on which banks and financial institutions can build, deploy and manage their own AI Employees. The launch takes place at Singapore FinTech Festival 2026.

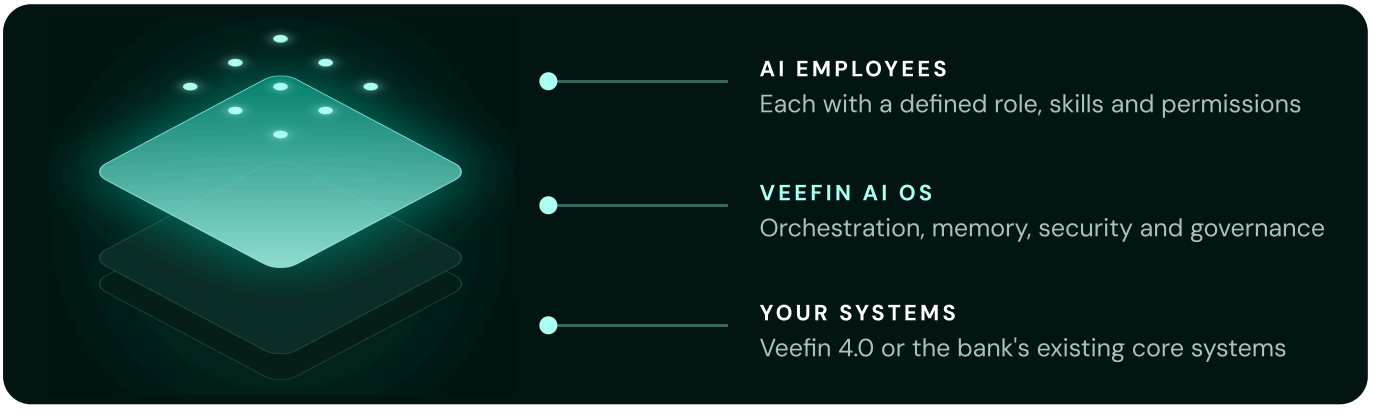

Veefin AI OS provides the foundation every AI Employee needs to work inside a bank: access to data and systems, orchestration, memory, security and governance. On top of it, banks create AI Employees, each with a defined role, skills and permissions, that take on real operational work across the universal banking suite, from retail and corporate banking to lending, payments, trade and treasury, alongside their human teams.

Banks worldwide are moving AI from pilots into production, but most face fragmented product stacks, long integration cycles and strict expectations on risk, audit and explainability. Veefin AI OS is part of Veefin 4.0, the company's unified, composable banking platform, and can also run independently on top of a bank's current systems, so institutions can start with one AI Employee and scale without a core replacement.

> **The AI workforce that knows banking and gets banking work done:** Veefin brings together banking-specific skills, business context, agent orchestration and governed execution to deploy AI Employees across Trade, Supply Chain Finance, Cash Management and Lending.

HOW VEEFIN AI OS WORKS

The agentic platform. Veefin AI OS is the operating layer that every AI Employee runs on. It provides:

Orchestration: coordinates AI Employees, tools and human approvals across multi-step banking workflows.

Connectivity: links to the bank's core, origination, payments and document systems through APIs, so AI Employees work on live data while the bank keeps control of it.

Governance and control: every action by an AI Employee is logged and traceable, with human approval at defined decision points and guardrails set to each bank's risk policies.

Flexible deployment: runs natively within Veefin 4.0 or standalone alongside a bank's existing systems, both on cloud and on-premise.

AI Employees. On top of the platform, banks create AI Employees for specific roles, give them skills and permissions, and supervise them the way they would a team. Veefin AI OS launches with ready-to-deploy AI Employees such as an AI Credit Processing Analyst that writes the credit memo against the bank's credit policy, an AI Trade Document Checker that checks presentations against the letter of credit and UCP 600, and an AI Receivables Reconciliation Analyst that matches incoming payments to open invoices. Banks can also build their own AI Employees for workflows unique to them.

Banks can start with a single AI Employee, measure its results, and grow governed AI Employees across business lines on the same platform.

Raja Debnath, Chairperson and Managing Director, Veefin, said:

"Banks don't need another AI pilot. They need AI that does real work inside the controls they already run. Veefin AI OS is the next step in our platform journey with Veefin 4.0: one governed foundation on which every bank can build the AI Employees it needs."

AVAILABILITY AND EARLY ACCESS

Veefin AI OS is available from today through the **Veefin AI OS Early Access Programme**. A limited cohort of 12 banks and financial institutions will work with Veefin's product and solutions teams to deploy their first AI Employees on priority workflows. Banks can register their interest **here**.

Visitors to Singapore FinTech Festival 2026 (18th to 20th November, Singapore EXPO) can meet Veefin's AI Employees at work at **Hall 2, Booth 2E34**.

ABOUT VEEFIN

Veefin Solutions Limited is a technology company providing enterprise software platforms and solutions to banks, financial institutions and corporates across the globe. Its solutions span supply chain finance, lending, trade finance, cash management and other banking and financial technology domains. The Company continues to expand its technology capabilities and market presence, with a focus on innovation, scale and long-term value creation.
